Technology for life and work *in India.*

Bhuh.ai Labs is the research and product division of Bhuh Prapadye Technologies. We develop software for everyday needs, with a focus on Indian languages, local resources and useful work.

01 What we build

Sahyog
CIRCULAR SUPPLY CHAINS

Brings producers, aggregators, loop organisers and consumers into a shared supply network.

Sabal
PERSONAL AI COMPANION

Sabal is for personal use. Its companion, Sakhi, is designed to help people ask questions, understand information and work through everyday tasks in their own language. The web app has Hindi and English interfaces.

Rachna and Mantri
OUR SOFTWARE FACTORY

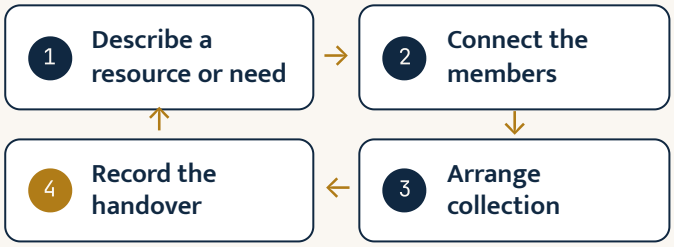

Two applications of our own. Rachna brings product requirements, architecture and delivery plans together. Mantri coordinates the coding agents and brings their work back for review. We build Sahyog and Sabal with them.

02 Where things stand

Sahyog app	WEB APP
Sabal app	WEB APP
Rachna	BETA PREVIEW
Mantri	BETA PREVIEW
Supply-chain agents for Sahyog	IN DEVELOPMENT
Bhojan, first proposed Sabal pack	COMING SOON
Links to India's public digital services	PLANNED

A new version of Rachna and Mantri is coming soon for public beta.

03 How a Sahyog loop works

↑ RECORDS INFORM THE NEXT COLLECTION

For example, a coconut seller's discarded husks can become raw material for a nearby processor.

04 What comes next

IN DEVELOPMENT

Supply-chain agents
Agents to help find resources and buyers, plan collections and coordinate local work.

PLANNED

Public digital services
Connecting our products with India's digital public infrastructure.

UPI · BECKN · ONDC · ACCOUNT AGGREGATOR · OCEN

Local work
We want loops to make collection, sorting, processing, repair and transport work visible, and help people find relevant opportunities.

05 Research we publish

- Small AI models for Indian languages
- How local supply chains can become circular
